

Jacksonville Developmental Center: An Analysis of Transition Outcomes

Amie Lulinski-Norris, Mary Kay Rizzolo & Tamar Heller

In 2010, the Department of Human Services' Division of Developmental Disabilities (DHS-DDD) engaged the Institute on Disability and Human Development (IDHD) to examine outcomes for individuals transitioning out of Illinois' nine State Operated Developmental Centers (SODCs) between October 1, 2001, and June 30, 2009. This brief focuses specifically on outcomes of the **144** individuals who moved out of Jacksonville Developmental Center (JDC), not including the five individuals who died there, during that time.

Where did people move?

- The majority (61.8%) of Jacksonville residents (n = 89) moved to a 24-hour CILA.

Did people remain in their transition placement?

Status of Individuals (as of June 30, 2009)

Placement	#	%
Continuous placement (remained with transition provider)	83	57.6%
Unknown*	28	19.4%
Deceased	17	11.8%
Transferred to another SODC	11	7.6%
Different residence, different provider (non-SODC)	4	2.8%
Transferred to a Mental Health Center	1	0.7%
Total	144	100.0

*SODCs are only required to follow-up with individuals for 1 year post-transition and thus will not necessarily have information on the status of all movers past that time.

Where did the deaths occur?

- 17 individuals died after moving out of JDC
 - ⇒ 11 (64.7%) of those deaths occurred in a skilled nursing facility (SNF)
 - ⇒ 4 (23.5%) occurred in a 24-hour CILA
 - ⇒ 1 (6%) occurred out of state
 - ⇒ 1 (6%) occurred in an ICF/DD

The majority of post-transition deaths occurred in skilled nursing facilities.

What were the characteristics of people who died in SNFs?

- Characteristics of the individuals who transitioned to an SNF and died were as follows:
 - ⇒ The average age was 62.5 years old (ranging from 34-89);
 - ⇒ The average HRST score was 4.7 (ranging from 2-6) which is in the “high moderate” to “high” health risk;
 - ⇒ The average ICAP Adaptive Behavior Score was 16 (ranging from 4-51) which is in the profound level of functioning;
 - ⇒ The average ICAP Service Score was 30 (ranging from 8-55), which indicates a need for extensive personal care and/or constant supervision; and
 - ⇒ Average length of stay at an SODC prior to going to an SNF was 12 years (ranging from under one year - 33 years).
